

## ABSTRACT

A method and system for providing a hot key corresponding to a particular function in a computer system is disclosed. The computer system has a graphical user interface (GUI) and a context in which the particular function is provided. The method and system include integrating a hot key configuring function into the GUI such that a user can access the hot key configuring function from the context. The method and system further allow a user to utilize the hot key configuring function in the context to map the hot key to the particular function.
